Dr. Marcos Loman

International Agronomy Director, BRANDT

Marcos Loman, Ph.D., serves as International Agronomy Director at BRANDT, leading research and technical development across more than 80 countries. His work focuses on advancing plant nutrition, fertiliser management, and soil fertility, with the goal of increasing crop productivity and promoting agricultural sustainability.

He holds a degree in Agronomy from the University of São Paulo, with further studies completed at Wageningen University in the Netherlands, and a Ph.D. from the University of Illinois, USA

High-yielding maize: Insights from U.S. record holders

BRANDT has worked with record-yielding growers for over 10 years, and one thing is clear: they pay attention to every detail and consistently use the best available technologies. In this session, we'll share key insights and lessons from these interactions, including examples such as David Hula, who uses BRANDT technologies and has achieved yields above 39 tons/ha. These insights are designed to help you take your maize yields to the next level.

Soybean nutrition & stress management for maximum yield

Soybeans have tremendous yield potential, as demonstrated by Alex Harrell, who set world records in 2023 and 2024 with yields exceeding 14 tons/ha. However, much of this potential is often lost due to limitations in nutrition and stress management. In this session, we'll cover key tools and management strategies used by these record growers to maximise yield and profitability.
